

## GardenSoft announces new product!

GardenSoft unveiled its latest product, the Water-wise CD, at the recent Southwest Horticulture Show in Phoenix, AZ. An Arizona state official was impressed with our CD that is used to educate the public on drought tolerant plants, irrigation and garden ideas. We are currently under contract with several water districts to develop CDs for their consumers.

## eCatalog distributed at trade show

Mountain States Wholesale Nursery gave out their first eCatalog CDs to customers at the Southwest Horticultural Show recently. The eCatalog features their best selling plants, information about those plants, pictures and ordering on-line capability. Mountain States expects their sales to increase with their eCatalog and views it as a great marketing tool.

## Meet us in Las Vegas

Please visit us at the Western Expo at the Las Vegas Convention Center on Oct. 22 and 23 in Booth #440.

Gerry Kiffe, general manager, of GardenSoft and Anne Chilcott, director of operations.

## Previous Newsletters Available

If you wish to receive previous newsletters, please email [anne@gardensoft.com](mailto:anne@gardensoft.com) and ask for them. Each one contains tips on using PlantMaster or GardenWorks.

## Express Yourself

GardenSoft is asking for feedback on the current version of PlantMaster (6.0) in order to improve it for the next version that will be released some time next year. Tell us what you like, don't like, would like to see... your comments may be emailed to [mark@gardensoft.com](mailto:mark@gardensoft.com). Make sure you let us know which version you currently own. We will be reviewing all feedback until the end of the year.

## Update Your Plant Database

One of our PlantMaster users in the central coast area of California (Santa Cruz) has taken the time to update her plant database of 86 plants in her area. The information was acquired from her Plant Materials II class taught by Lisa McAndrews, Landscape Architect and renowned instructor at Cabrillo Community College. Our user has sent us her PlantMaster project that contains the updated information. If you would like the data acquired from Lisa's class, go to:

[www.gardensoft.com/downloads/PLANTMATERIALS2.PMP](http://www.gardensoft.com/downloads/PLANTMATERIALS2.PMP)

You can download this PlantMaster project to "my documents". Then open up PlantMaster and click on Projects. You will be on the Project info tab. Look at the bottom of the screen and click on "import project". A window will open up; navigate to "my documents", highlight the PLANTMATERIALS2.PMP and click on "import". You have imported a PlantMaster project to your list of projects. (only available for 5.7 and 6.0 users)
